

AGENDA

-> Discuss how to avoid 1000s of hours of torture.

① POC $\rightarrow$ proof of concept.

no one has done
this before

Every company is unique
Very Secretive

Classification $\rightarrow$ Logistic Regression

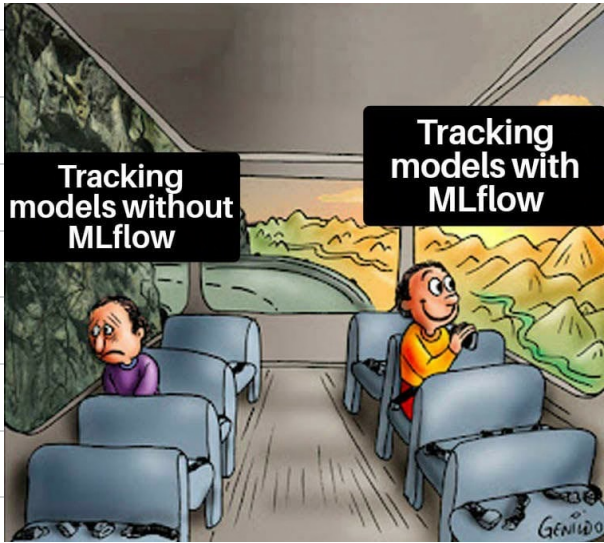

Decision tree } hyper-param Junin?

└ } $\rightarrow$ hyper-parameter $\rightarrow$ h_1
└ } new accuracy

100s of others } data - very big
└ } cont afford
└ } grid-search

After 2-3 days exhausted Cross - new

MLFLOW

What we can log

(i) Param

(ii) metric

(iii) log some custom File

↳ Pickle File

↳ Image

Size-limit → 5 GB

DRIFT

① Concept drift (Model-drift)

→ target variable itself changes

→ Bot / Fraud detection

↳ Change the way they move

Target is changing

→ Solution: ??

↳ train on most recent data

② Data drift

↳ model's input dist change

↳ Relationship b/w input
&
target

they change.

→ Solution: Engineer new feature
